→ EXPERIENCE

DHA GUJRANWALA

JULY 2018 – Present

Software Engineer

Analyzes requirements, designs systems, and develops software for fast paced workflow in this organization.

- **Analyzed organization workflow to automate internal tasks:** was hired to build the internal suite of Applications in the organization which would make existing workflow efficient and fast. So developed organization's Plot and Land Management systems which increased time efficiency of process to 50%. Automated report generation, challan generation, data entry tasks.
- **Migrated Records, Developed Highly performant Financial System:** Developed Financial system using latest .NET stack employing WPF to build desktop application which is being used internally to produce Financial documents such as Balance Reports, Vouchers and Voucher Reports. Also migrated existing Financial records from excel sheets, Legacy application into newer, faster system. Financial system was built to handle simultaneous users and concurrency.
- **Built interconnected microservices to update Website:** Participated in building highly interconnected suite of services which worked together to produce performant and easy to use cluster of apps. Used ASP.NET MVC and Web API stack to connect local databases and software to web facing interface to provide installment related services to customers.
